

INFORMATION SECURITY POLICY

With our vision of sustainable growth, we act as a pioneering and exemplary force in the industry, fulfilling our responsibilities towards society, our stakeholders, employees, and the environment at the highest level.

By focusing our investments on people, information, and technology, we secure our operations in alignment with our mission and vision. We recognize that information security is not merely a procedure but a core value that falls under the responsibility of all our employees. With this awareness, we commit to protecting the confidentiality, integrity, and accessibility of information belonging to our company and stakeholders with a sustainable perspective.

In this context, as SAYTEK, we strictly adhere to the following principles:

- Establishing, implementing, regularly reviewing, and continuously improving a structure that complies with international standards,
- Defining the necessary authorities, roles, and responsibilities for the effective establishment and operation of the information security management system and periodically reviewing these elements,
- Identifying and classifying our information assets meticulously, determining potential risks that may threaten these assets, and developing effective risk management strategies,
- Ensuring full compliance with all legal obligations and contractual requirements related to information security, fulfilling our legal responsibilities without exception,
- Preparing comprehensive business continuity plans to maintain operational continuity in case of disruptions and testing these plans regularly,
- Managing information security vulnerabilities and breaches proactively and taking solution-oriented steps to prevent recurrence,
- Enhancing awareness of the human factor, which is one of the most critical elements of information security, by organizing continuous training programs for our employees and key stakeholders and systematically monitoring the outcomes.

In line with these commitments, we prioritize information security at the highest level and aim to create a sustainable, secure, and efficient working environment.
