ENERGY MANAGEMENT POLICY

SAYTEK considers energy management a strategic priority in line with its sustainable development goals. In this regard, we aim to implement innovative and future-oriented energy management systems while continuously improving our existing systems to reduce our environmental impact and enhance energy efficiency. Energy efficiency and sustainability form the foundation of all our operations, and we strictly adhere to the following principles:

1. Compliance with Legal Regulations and Standards

We are committed to ensuring full compliance with all applicable legal regulations, national and international standards at every stage of our energy management processes. All our energy management activities are conducted in strict accordance with relevant legal requirements and environmental regulations. Additionally, we continuously monitor and integrate the latest advancements and best practices in energy management.

2. Continuous Improvement and Performance Monitoring

Our core approach is to continuously review and enhance our energy management system. We track our set targets through performance indicators and consistently evaluate our energy efficiency. While developing innovative solutions to achieve our objectives, we also manage emerging risks effectively. In line with our commitment to continuous improvement, we develop strategies to enhance our energy efficiency.

3. Efficient Use of Resources

To achieve our energy management goals, we prioritize securing the necessary human resources, technology, and financial assets. By utilizing these resources in the most efficient manner, we enhance our investments in sustainability and energy efficiency. We continuously review our internal processes to identify more effective ways to use our resources. This allows us to develop sustainable solutions that reduce both our environmental impact and operational costs.

4. Awareness and Training

We organize training programs to raise awareness among our employees and stakeholders about energy efficiency. Through various communication activities, we educate our employees on the effective use of natural resources, reducing energy losses, and the importance of clean energy utilization. By increasing awareness at all levels, we aim to establish a culture of energy conservation throughout our organization.

5. Combatting Climate Change

Combatting climate change is one of the key elements of our sustainability objectives. We develop projects that reduce carbon emissions and energy consumption to minimize our environmental impact. Throughout this process, we closely follow industry best practices and fulfill our global responsibilities. Additionally, we monitor our energy consumption and take the necessary measures to contribute to the fight against climate change.

6. Energy-Efficient Technologies and Applications

SAYTEK incorporates the most efficient technologies in its production and service processes to enhance energy efficiency. We prioritize the use of energy-saving equipment, machinery, and systems. By implementing energy monitoring systems, we analyze our energy consumption and develop more efficient solutions based on data insights. Our goal is to accelerate the transition to green energy by increasing our investments in sustainable energy sources.

7. New Projects and Innovative Solutions

We develop innovative projects to improve energy efficiency, optimize resource utilization, and reduce our environmental impact. These projects not only aim to lower the company's energy consumption but also contribute

to environmental sustainability. By integrating next-generation energy solutions and technologies, we strive to enhance our operational efficiency.

8. Transition to a Low-Carbon Economy

SAYTEK structures its investments around energy-efficient infrastructures that support the transition to a low-carbon economy. Our innovative designs reduce our environmental footprint while simultaneously lowering long-term operational costs. By utilizing high-efficiency infrastructure, we aim to deliver more sustainable projects for the future. This strategy serves as a fundamental guide in all our projects.

Conclusion

At SAYTEK, we are committed to continuously fulfilling our obligations to enhance energy efficiency, minimize environmental impact, and reduce carbon emissions. We prioritize sustainability in all our operations and adopt a proactive approach to energy management. By taking significant steps with all our stakeholders, we aim to build a more efficient and sustainable future, both environmentally and economically.
